Samsung Compressor

BRIEF HISTORY

1976 Started to produce Medium size Recipro. Compressor

1987 Started to produce Small size Recipro. Compressor

1990 Started to produce Rotary Compressor

1993 ISO9001 Certified

1995 Started to produce Inverter Rotary Compressor

1996 ISO14001 Certified

1999 Started to produce Inverter Recipro. Compressor

2003 Started to produce Rotary Compressor in China

2006 Moved all Korean Rotary Compressor line to China

2007 Started to produce world first aluminum wire Reciprocating Compressor

2011 Established 2nd Recipro. Compressor factory in China

2012 Started to produce Scroll Compressor in China

2014 Started to produce Ultra mini size Rotary Compressor

2016 Started to produce Rotary R32 BLDC compressor

2017 Recipro. Compressor celebrates the milestone of 200 million produced

1970~1980
Business Readiness

1990
Growth & Innovation

2000
Global Expansion

2010
Face of the Future

Reciprocating Compressor MODEL IDENTIFICATION

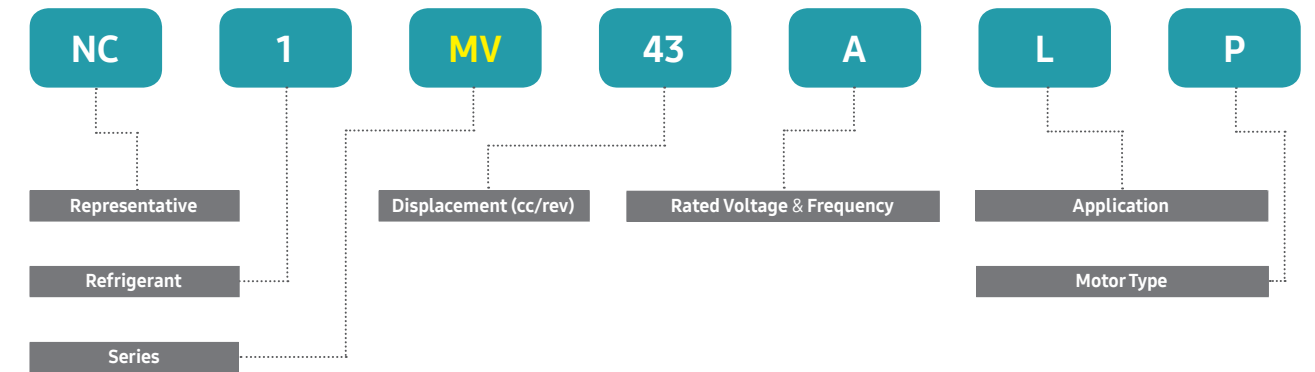

NAME PLATE

SAMSUNG MSA162D-L1A E01
 115-127V~60Hz 12.2 LRA RoHS Compliance
 IPH THERMALLY PROTECTED 4418C3ZJC00001
 R-134a MADE IN KOREA

SAMSUNG NC4EVA5ALM E01
 160-260V~70-180Hz RoHS Compliance
 USE with controller ISB-LC3_3A
 THERMALLY PROTECTED 3467C3ZJC00001
 R-600a MADE IN KOREA
 Caution : risk of fire

Ver. 02 Series | EV, MV, A, AV

1) Compressor model identification

Ver. 01 Series | CD, MSS, MSA, MSE, ENV, MSV

MSS 1 43 C — **L 1 B**

Series	Refrigerant	Displacement (cc/rev)	Rated Voltage & Frequency	Application	Cooling Type	Motor Type
MSS	1 R134a LBP, 4 R600a LBP, 6 R134a HBP, 7 R134a DBP	24-90 (2.4-9.0cc), 10-15 (10.0-15.0cc), A0-A5 (10.0-15.0cc)	A BLDC, B 220V ~ 60Hz, C 115V ~ 60Hz, D 115-127V ~ 60Hz, E 100V ~ 50/60Hz, 110V ~ 60Hz, F 220V ~ 50Hz, G 220-240V ~ 50Hz, 220V ~ 60Hz, H 200-220V ~ 50Hz, 220V ~ 60Hz, J 110-127V ~ 60Hz, 100V ~ 50Hz, K 200-220V ~ 50Hz, P 127V ~ 60Hz, Q 220-240V ~ 50Hz, S 200-230V ~ 50Hz, X 220V ~ 50Hz	L LBP (Low Starting Torque), H HBP (Low Starting Torque), T Tropical, M MBP, S High Starting Torque, R High Efficiency, D DBP (Dehumidifier)	1 Static, 2 Fan	

Ver. 03 Series | NF, NN

NF 3 1 M 9 43 1 A P

COOLING TYPE

FC : Fan cooling
OC : Oil cooling
ST : Static

ASHRAE CONDITIONS (LBP)

Evaporating Temp. : -23.3°C (-10°F)
Condensing Temp. : 54.4°C (130°F)
Gas Superheated to : 32.2°C (90°F)
Liquid sub-cooled to : 32.2°C (90°F)
Ambient Temp. : 32.2°C (90°F)

Unit conversion table

1 watt = 3.41 Btu/Hr
1 watt = 0.86 Kcal/Hr
1 Kcal/Hr = 3.97 Btu/Hr

Reciprocating Compressor APPLICATION GUIDE

Compressors under improper application can not achieve good performance and long-life reliability. This application guide provides the recommended handling techniques and requirements for application of SAMSUNG reciprocating compressor in order to help achieving good performance and long-life reliability.

1. Usable Refrigerant

	LBP(Low Back Pressure)		HBP(High Back Pressure)
REFRIGERANT	R134a	R600a	R134a
	Purity of 99.95% Min.	Purity of 99.5% Min.	Purity of 99.95% Min.

2. Starting condition

The LBP type compressors start at 85% of the nominal voltage.

- Equalized pressure up to 70psig(4.9kgf/cm²g) for R134a LBP compressors.
- Equalized pressure up to 40psig(2.8kgf/cm²g) for R600a LBP compressors.

The HBP type compressors start at 90% of the nominal voltage.

- Equalized pressure up to 90psig(6.3kgf/cm²g) for R134a HBP compressors.

Depending on the operating condition and system characteristics, compressors can be started at lower voltages.

3. Temperature and Pressure of cycle

The refrigerant system must be used within the temperature and pressure range as below table.

In case of LBP refrigerant system with R134a and R600a refrigerant gas

* Remarks

1. "A" area on chart : Stabilized running condition before stopping.
2. "B" area on chart : Transient running conditiona just after starting.
3. "C" area on chart : Compressor initial pull-down and restarting after defrost.

In case of HBP refrigerant system with R134a refrigerant gas

* Remarks

1. "A" area on chart : Stabilized running condition before stopping.
2. "B" area on chart : Transient running condition just after starting.
3. "C" area on chart : Compressor initial pull-down and restarting after defrost.

4. Motor Winding Temperature

In case of LBP refrigerant system

The motor winding temperature should not exceed 120°C(248°F) in the continuous operation and 130°C (266°F) in the Pull-Down operation at the expected ambient temperature(43°C)

In case of HBP refrigerant system

The motor winding temperature should not exceed 120°C(248°F) in the continuous operation and 130°C(266°F) in the Pull-Down operation at the expected ambient temperature(26.7°C, 81°F)
The limit motor winding temperature should not exceed 130°C(266°F) at the expected maximum ambient temperature(32.2°C, 90°F).

If the temperature exceeds, the motor is overloaded, then it shortens the motor life. The winding temperature of the motor can be calculated by below equation.

$$T2 = (R2-R1)/R1*(K+T1)+T1$$

- T1 : The room temperature at the beginning of the test
- T2 : The winding temperature(unknown) at the end of the test
- R1 : The resistance at the beginning of the test
- R2 : The resistance at the end of the test
- K : Temperature coefficient of resistance
(Copper wire : 234.5, Aluminum wire : 225.0)

Reciprocating Compressor

APPLICATION GUIDE

5. Other Temperatures

Below temperatures should not be exceeded the refrigerant system to be operated normally.
If the test temperature is not indicated, it is measured at the ambient temperature.

Application	Refrigerant	Suction Gas Temp	Discharge Gas Temp	Compressor Upper Surface Temp
LBP	R134a	Than the ambient temperature -2°C(28°F) ~ +1°C(34°F), to prevent dew formation.	Max. 100°C(212°F) Peak 115°C(239°F)	Max. 100°C(212°F) in the hot side Min. 5°C(41°F) in the low side at 43°C(109°F) ambient temp.
	R600a			
HBP	R134a		Max. 100°C(212°F) at 26.7°C(80°F) ambient temperature Peak 115°C(239°F) at 32.3°C(90°F) ambient temperature	Max. 100°C(212°F) in the hot side Min. 5°C(41°F) in the low side at 32.2°C(90°F) ambient temp.

※ Measurement location

Suction Gas Temperature is measured at the distance 15cm of the insulated surface suction pipe from welded case.
Discharge Gas Temperature is measured at the distance 5cm of the insulated surface discharge pipe from welded case.

6. Refrigerant Charging

For each refrigerant system, the optimal refrigerant Charging amount should be determined in an appropriate test laboratory in order to obtain the best working condition.
If the refrigerant amount exceeds or lacks compared to the proper amount range, it'll be caused loss of cooling capacity, lowering of efficiency and damage of compressor life.
The refrigerant charge of the refrigerant system must not exceed above No.2 start condition as suction and discharge pressure.

7. Operating condition

The refrigerant system should be maintained as below table.

Application	Refrigerant	Compression Ratio	Operated Ratio	Ambient Temperature	Refrigeration Oil	On/Off Cycle Time
LBP	R134a	Max. 12.7	Max. 65% Based on Ref. Normal-Normal Condition	Max. 5°C ~ 43°C (Max. 41°F ~ 109°F)	TAN 0.01mg- KOH/ g max. Moisture 10ppm max.	Restarting time limit must be longer than 5 minutes
	R600a	Max. 12.4				
HBP	R134a	Max. 3.9	Max. 65% Based on Normal-Normal Condition at 26.7°C ambient Temp.		TAN 0.01mg- KOH/ g max. Moisture 20ppm max.	Max. 6 times/ hours

8. Evacuation of cycle

Prevent non-condensable gases, such as air, from permeating into the cycle.

Air or non-condensable gases in the refrigerant cause a decline in cooling capacity and a rise in input wattage due to high discharge pressure.

In particular, air(Oxygen) cause the generation of sludge and shortening of compressor life. Therefore, the non-condensable gas in R134a system must not exceed 1%(vol.)

The recommendable vacuum level is under 0.08 Torr(mmHg), and the evacuation time must be 40 minutes or more with the capacity of vacuum pump of 300 LT/min or more.

The vacuum pump should be used exclusively, and it is better to vacuum simultaneously in high and low pressure sides with a pump per system.

It is not allowed that putting electric power into the compressor with a vacuum condition, then electric spark will be occurred in the compressor and compressor can be damaged critically. (Vacuum Discharge)

9. Filter dryer

The filter dryer must be chosen with the molecular sieve suitable to the refrigerant type as below.

	R134a	R600a
FILTER DRYER	XH-7 or XH-9	XH-5

※ If a filter dryer of the refrigerant system is not chosen properly, it can be a source of the indicated causes as below table.

Problems	Appearances
Ice build-up	The moisture in the capillary tube is frozen, then it reduces the cross-sectional area of capillary tube and finally obstruct the capillary tube.
Acid build-up	The moisture reacts with refrigeration oil and then creates acid. Acid is caused as bellow chemical typical marks and consequences. - Copper plating of valve plate, valve reeds, crankshaft, bearing, block, frame etc. - Etching of electric motor insulation with burning of motor winding. - Destruction of the filter with disintegration of molecular sieve and build-up of "dusts"
Oil contamination	The moisture causes acidification and reduction of the lube capability of the refrigeration oil with change of oil color as brown. It can cause build-up of sludge with subsequent poor lube of compressor.

10. Notice in handling, storage and transportation of compressor

10-1. Compressor with the removal of rubber cap from tube should be assembled with the cycle as soon as possible. It is not allowed that the compressor without rubber-cap is left in the air more than 15 minutes.

10-2. Compressor might be affected by the environmental condition which it is stored.

So, compressor that is charged with nitrogen and sealed should be used within recommendation period.

	R134a	R600a
Storage	8 months	10 months

After recommendation period, compressor can be used after validating the moisture level of compressor inside.

10-3. The finished product(compressor adopted to application) should be positioned upright during transportation.

If the other transportation condition is needed, the discussion with SAMSUNG must be done in advance.

Reciprocating Compressor APPLICATION GUIDE

11. Handling

Handle with care

Max 3 Carton

BASIC STRUCTURE

Mini Compressor is Compact and provide the Outstanding Performance

APPLICATIONS

Portable Refrigerator

- Car Refrigerator
- Marine Refrigerator
- Water Purifier
- Wine Cellar

Personal Cooler

- Personal A/C
- Toilet A/C
- Desk Top Cooler
- Kitchen Cooler

Dryer/Washer

- Front Load Washer
- Top Load Washer
- Wardrobe Dehumidifier
- Dehumidifier

Wearable Cooler

- Cooling Jacket
- Cooling Military Uniform
- Medical Cooler

WARNING / DANGER

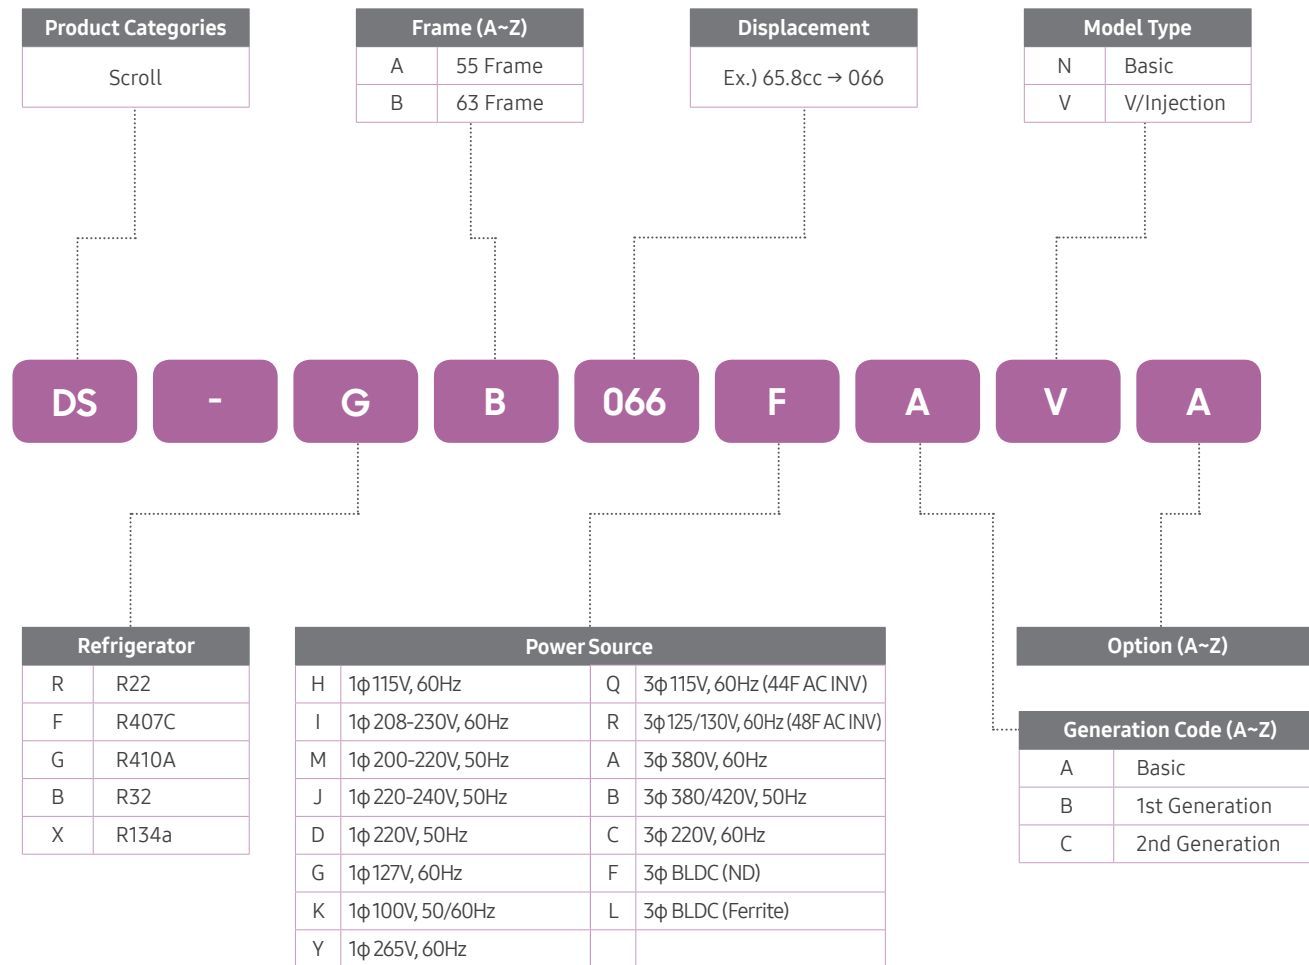

FAILURE TO FOLLOW THESE INSTRUCTIONS COULD RESULT IN SERIOUS PERSONAL INJURY.

1. Ground the equipment securely.
2. Turn off power before servicing.
3. Mount the terminal cover in place whenever Power is applied to this compressor.
4. Wear protective goggles when servicing.
5. Before brazing, remove pressure from both High and low side.
6. Do not use this compressor to compress air.
7. Use only approved refrigerants and lubricants.
8. Do not touch with bare hands during running Or after stopping instantly.
